Project #A - Python

1. Input 7 integers: a,b,c,d,e,f,g using int(input())

2. Define two functions(numEdges and numPaths) to calculate numEdge and numPath

3. Formulas for both functions are copied from the c sample code

4. Print numEdge and numPath

How to run the code

1. Type the command "python ProjectA.py"

2. Type the Input:

Sample Input:

3

2

2

2

2

3

2

Sample Output:

44

40
